

# FREE ELECTRICITY FOR 25 YEARS PLUS

Our solar PV (Photovoltaic) systems produce electricity from sunlight, even on cloudy days, are extremely affordable and reliable. They will help you:

- ◆ Save on your electricity costs
- ◆ Earn guaranteed income
- ◆ Reduce your carbon footprint
- ◆ Generate clean, green, renewable power

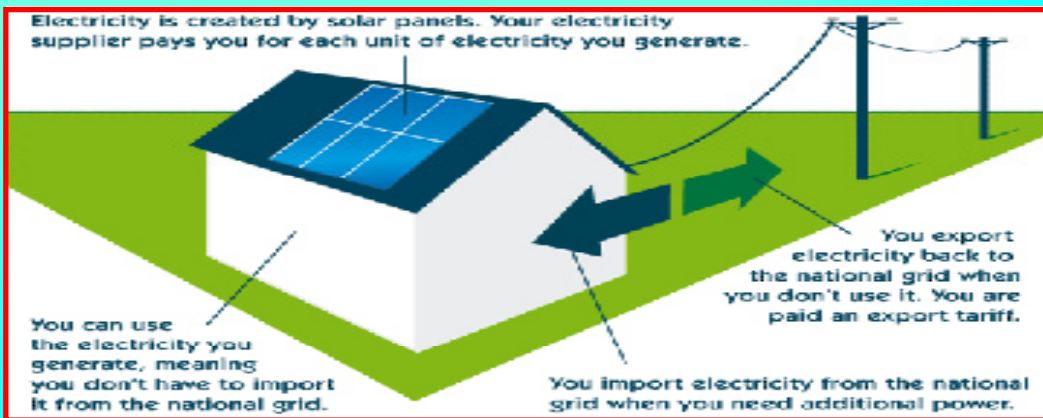

**How the scheme works** – Those homes or businesses eligible to receive the Feed-in Tariff will benefit in 3 ways:

**Generation tariff** – a set rate of 41.3p/kWh is paid by your energy supplier for each unit (kWh) of electricity you generate. This rate may change each year for new entrants to the scheme (except for the first 2 years), but once you join you will continue on the same tariff for 25 years in the case of solar electricity (PV).

**Export tariff** – you will receive a further 3p/kWh from your energy supplier for each unit you export back to the electricity grid when it isn't used by you. The export rate is the same for all renewable technologies.

**Energy bill savings** – you will be making savings on your electricity bills, because generating electricity to power your appliances means you don't have to buy as much electricity from your energy supplier. The amount you save will vary depending on how much of the electricity you use.

**You'll need a roof that faces within 90 degrees of south and isn't overshadowed by trees or buildings. If the surface is in shadow for part of the day, your system will generate less energy.**

## THE OPTIONS AVAILABLE TO YOU

**Get FREE electricity** – We offer a solar PV system for a mere £500 (home) £1,000 (business) one-off payment and you receive all the electricity it produces, which you use, absolutely free. Typically, this could save you around 40% on your home or business electricity bills. Over the 25 years life expectancy of our systems, we collect the Feed-in Tariff payments, which covers our costs to supply and maintain your solar installation. And after 25 years the system is yours.

**FREE electricity and collect the FIT** – If you prefer to purchase your solar PV system outright, you can do so starting from as little as £7,148. The payback period should be within 5-7 years.

Today, investing in a solar PV (Photovoltaic) system can generate real financial benefits. With the governments Feed-in Tariff scheme you can generate tax free, index linked income for 25 years that offers a far better return than many standard savings products.

**The product** – Everything we install is fully MCS compliant, proven technology. From the solar panels themselves right down to the smallest fixings, we have scrutinised every aspect of our systems to ensure the highest level of manufacture so that you have complete peace of mind.

All of our systems come with an insurance backed guarantee, so that if your system doesn't perform as we think it should we'll refund you the difference.

**What happens now** – When you phone we'll make an appointment to visit your home or business to explain in detail and If you wish, make an appointment to complete an in-depth survey so you can be absolutely sure everything will be as you want it. We'll answer any questions you may have and we promise there won't be any 'hard sell'.

Once you've decided to go ahead we'll come around and install your system, and take every step to ensure your system is installed as quickly and easily as possible.
